CC antibodies and methods for detecting the presence of 53010 potesins, fusion protesins, antigenic peptides, anti-53010 CC antibodies and methods for detecting the presence of 53010 polypeptides or nucleic acids, of identifying a compound that binds to the 53010 CC polypeptide, and of modulating the activity of the polypeptide. The 53010 CC nucleic acids and polypeptides can act as novel diagnostic and CC cherapeutic agents for controlling disorders involving aberrant or CC deficient hydrolysis of carboxylic esters. As 53010 mRNA is highly CC expressed in the central and peripheral nervous system, and its CC expression is regulated in some rodent pain models, 53010 molecules can CC also act as novel diagnostic targets and therapeutic agents for CC controlling neurological disorders, such as pain-related disorders. A CC claimed method of treating or preventing a disorder (especially a pain-CC expressing cell involves administering a compound that modulates 53010 CC activity or expression. 53010 nucleic acids are also useful in chromosome CC mapping, tissue typing, in forensic biology, prognostic assays, in and in pharmaconnemics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Claim 1; SEQ ID NO 45; 542pp; English

The present invention describes the use of polypeptides related to curological disorders for identifying a subject having a urological disorder. Curological disorder, identifying a subject having a urological disorder. (1) a method for identifying a urological disorder. Also described: (1) a method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological disorder; and (3) a method for treating a subject having a urological disorder; The compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence encodes a human urological disorder related protein, which is used in the exemplification of the present ng a 23

S

New diagnostic and therapeutic polynuclectides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or in gene mapping.

Claim 1; Page; 190pp; English

The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorders, or disorder, endocrine CC disorder, neurological disorders, gastrointestinal disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format CC directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide

New polynucleotides and polypeptides, useful for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy.

Claim 1;

Page; 222pp; English.

therapy.

Query Match Best Local Similarity Matches 1940; Conserv is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The polynucleotides and encoded proteins are useful as pharmaceutical agents and many disease-related genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell regeneration. Membrane proteins, signal transduction-related proteins, ranscription-related proteins, disease-related proteins and genes encoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a CDNA of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. 09-JAN-2001;
30-JAN-2001;
            The invention relates to an isolated polypeptide with signal so which allow it to be secreted extracellularly or membrane associativity of polypeptides of the invention may be described as, cytostatic, vulnerary, antianteriosclerotic, antiparkingonian,
                                                                                                                               Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder.
                                                                                                                                                                                                                                                                                                                        (SMIK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               17-DEC-2001; 2001WO-US049232

```

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease. Sequence 1962 BP; 428 A; 541 C; 473 G; 520 T; 0 U; 0 Other, Similarity Conservative 73.2%; 0; Mismatches Score 1579.4; Pred. No. 0; DB 1; Indels 150; 10; Length Gaps

                                                                                                                                                                                                                                                          The invention relates to human polypeptides, termed NOVX, and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, aortic stenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subaortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABX72170-ABX72275 represent human NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gorman L, Shence Padigaru M, Shi Anderson DW, Le Macdougall JR, Ellerman K;

```
cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nostropic, conductive, immunosuppressive, haemostatic, antiinflammatory, conductive, antivider, virucide, antithyroid, cerebroprotective, anorectic, conductatic, antivider, virucide, antithyroid, cerebroprotective, anorectic, conductation, replaced and polynucleotides of the invention are conducted in the treatment, or as a vaccine in the prevention of, cancer, conduction, and line disorders, infection, atherosclerosis, Parkinson's disease cound healing disorders, infection, atherosclerosis, Parkinson's disease conduction, neoplastic diseases, nervous system related disorders and cardiovascular disorders, pancreatitis, respiratory disorder, configuration, systemic autoimmune disease, hyper-immunity, configuration, systemic autoimmune disease, hyper-immunity, configuration, thyroid disorders e.g. hypothyroidism, brain damages, collitis, cone phototranduction deficiency, neurological diseases, sperm dysfunction, thyroid covulation disorders, diseases in the spinal cord, thyroid gland, heart, corraches, thymus, lymph node and muscular system, obesity, anorexia, corrected sequences given in records ABQ86130-ABQ86184 represent novel human cDNA's of the invention
The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. activity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootrop.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorde
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 2(a); Page 251-252; 335pp; English.

Human drug metabolizing enzymes, useful in the diagnosis and treatment disorders associated with aberrant (DME) activity, e.g., cancer and autoimmune disorders. of.

Claim 12; SEQ ID NO 20; 142pp; English.

This invention relates to novel drug metabolising enzymes (DME) and the nucleotide sequences which encode them. The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or hepatotropic activity acting as an agonist or antagonist of drug metabolising enzyme activity. The invention may be used in the diagnosis and treatment of disorders associated with decreased or increased expression or activity of drug metabolising enzymes. Such disorders expression or activity of drug metabolising enzymes. Such disorders include cancer, cell proliferative disorders, autoimmune/inflammatory, endocrine, eye, gastrointestinal (including liver disorders) and metabolic disorders. The present sequence is that of a gene which encodes a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic format from EPO.

XX JP2003250575-A. Cat cauxin encoding ADF50146 12-FEB-2004 cauxin; standard; cDNA; cat kidney disease marker; (first CDNA SEQ entry) 2145 Ħ ₽₽ NO:3. kidney disease; gene;

04-MAR-2002; 2002JP-00057908 (TOHO-) TOHOKU TECHNOARCH 04-MAR-2002; 2002JP-00057908 09-SEP-2003.

Novel ca cauxin protein or its salt, useful as or diagnosing cat kidney disease. D cat kidney disease marker,

6; SEQ ID NO 3; 33pp; Japanese.

The present sequence encodes a cat cauxin protein (I) or its salt, which is cat kidney disease marker. Also described: (1) a partial peptide (II) of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which couples specifically with (I) or (II); (7) diagnosing cat kidney disease which involves measuring (I) quantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney disease diagnostic agent comprising (I) labelling agent, a reagent which measures the biological activity of urinary (I) or (VI); and (9) a cauxin and (9) a cauxin the biological activity of urinary (I) or (VI); and (9) a cauxin cat kidney disease marker and (VI); is useful as a datection kit which measures cauxin in a test sample. (I) is useful as a disease. (I) enables detection of cat kidney disease simply and correctly. (I) provides an early marker for the disease, and replaces

Also described: (I) a partial peptide (II) CC of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) (CC comprising (III); (4) a transformed host (V) comprising (III) or (IV); (CC (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which CC couples specifically with (I) or (II); (7) diagnosing cat kidney disease (CC which involves measuring (I) quantitatively, and where reduction of (I) indicates presence of the disease; (8) a cat kidney disease (CC diagnostic agent comprising (I) labelling agent, a reagent which measures (CC diegnostic agent comprising (I) and (9) a cauxin (CC detection kit which measures cauxin in a test sample. (I) is useful for disease simply and (CC correctly. (I) provides an early marker for the disease, and replaces (CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, CC blood testing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
The invention relates to a purified human carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme and its DNA are useful for screening for agents which decrease or modulate the activity of carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme
                                                                                                                                               Novel human carboxylesterase-like enzyme polypeptide, regulators of which are useful for preventing and treating organophosphorus intoxication,
                                                                                                  Claim 1;

CC useful for treating a carboxylesterase-like enzyme dysfunction related CC disease, such as organophosphorus intoxication, cancer and osteoporosis. CC Compounds that increase the ability of human carboxylesterase-like enzyme CC to bind to organophosphorus compounds are useful as detoxifying agents. CC treating osteoporosis, Paget's disease and degradation of bone implants. CC particularly dental implants. Carboxylesterase-like enzyme is useful in CC diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases or abnormalities related to the presence of cutations in the nucleic acid sequences which encode the enzyme. The CC in gene therapy and for generating antisense oligonucleotide is useful CC in gene therapy and for generating antisense oligonucleotides or cribozymes which specifically bind to mRNA transcribed from CC useful for modulating carboxylesterase-like enzyme gene expression. The CC useful for modulating carboxylesterase-like enzyme gene expression. The CC useful for modulating carboxylesterase-like enzyme cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
